

TegoBloc™ Swell

Introducing TegoBloc™ Swell, a high-quality waterproofing sheet designed for below-grade concrete construction. Made with sodium bentonite, it is lightweight and more durable than traditional bentonite products. Its impervious design provides exceptional waterproofing protection for structures such as:

- Structural Slabs
- Property Line Walls
- Backfilled Walls
- Cut-and-Cover Tunnels
- Earth-covered Structures
- Elevator Pits

TegoBloc™ Swell is perfect for precast concrete construction and works exceptionally well in contaminated soil conditions. It expands in hydrostatic and non-hydrostatic conditions, sealing small concrete cracks caused by ground settlement or concrete shrinkage. It can be installed on green concrete without the need for primers or adhesives and is ultra-adaptive, even in extreme temperatures.

Advantages

- + Easy to install
- + Highly durable, self-seaming and self-sealing
- + Protects against water ingress and moisture damage
- + Perfect for horizontal or vertical foundation surface installation, in almost any weather condition
- + Protects against contaminants such as saline, nitrates, phosphates, and more

Environmental and Safety

- + VOC-free
- + Environmentally safe

Bentonite Blindslide Below Grade Waterproofing
